

SWAG LABS – MANUAL QA TEST PLAN

Application: Swag Labs

Website: <https://www.saucedemo.com>

Testing Type: Manual Functional & Exploratory Testing

Tester/: Bandaboina Ketha

Date: 8/10/2026

1. Objective

The objective of this test plan is to test the main functionality of the Swag Labs e-commerce website through manual testing.

The testing focuses on the complete user journey, starting from login, product browsing, cart management and checkout. Exploratory testing will also be performed to identify unexpected or hard-to-find issues.

2. Scope

The following areas are included in testing.

2.1 Login

- Login with valid credentials.
- Login with a locked-out user.
- Login with invalid or incomplete credentials.
- Verify that appropriate error messages are displayed.
- Verify that the user is redirected to the Products page after successful login.

2.2 Product Browsing

- Verify that products are displayed correctly.
- Verify product names, prices, descriptions, and images.
- Open individual product details.
- Verify that the selected product matches the product shown on the details page.
- Navigate between the Products page and product details.

2.3 Shopping Cart

- Add a product to the cart.
- Verify the cart count.
- Open and view cart contents.
- Remove a product from the cart.
- Verify that the correct product is added or removed.
- Test adding different products.

2.4 Checkout

- Proceed from the cart to checkout.

- Enter customer information.
- Verify required checkout fields.
- Continue to the order summary.
- Verify the checkout flow and order completion.

3. Types of Testing

Functional Testing

Verify that the main functions of the website work as expected, including login, product selection, adding products, removing products, and checkout.

UI Testing

Verify that product names, images, prices, buttons, input fields, and other visible elements are displayed correctly.

Negative Testing

Test invalid or incomplete inputs, such as incorrect login details and missing checkout information.

Edge Case Testing

Test situations that may not occur during normal use, such as repeatedly adding and removing products or working with multiple products in the cart.

Exploratory Testing

Explore the application without following only predefined test cases to identify unexpected behavior and less obvious defects.

Cross-Browser Considerations

The application should be checked on different browsers where available to identify browser-specific issues.

4. Test Environment

Item	Details
Application	Swag Labs
Website	https://www.saucedemo.com
Testing Type	Manual Testing
Device	Laptop
Operating System	Windows
Browser	Google Chrome
Test User	problem_user
Password	secret_sauce

Note: The operating system and browser should be updated with the actual environment used during testing.

5. Test Data

The assignment provides the following test users:

Username	Purpose
standard_user	Normal application functionality
locked_out_user	Verify locked-out user behaviour
problem_user	Test application with intentional bugs
performance_glitch_user	Check slow-loading behaviour

Password: secret_sauce

6. Test Cases

TC-001 – Login with Valid Credentials

Objective: Verify that a valid user can log in successfully.

Steps:

1. Open the Swag Labs website.
2. Enter standard_user in the Username field.
3. Enter secret_sauce in the Password field.
4. Click **Login**.

Expected Result:

The user should log in successfully and be taken to the Products page.

TC-002 – Login with Locked-Out User

Objective: Verify that a locked-out user cannot access the application.

Steps:

1. Open the Swag Labs website.
2. Enter locked_out_user.
3. Enter secret_sauce.
4. Click **Login**.

Expected Result:

Login should not be successful and an appropriate error message should be displayed.

TC-003 – Add Product to Cart

Objective: Verify that a product can be added to the shopping cart.

Steps:

1. Log in using standard_user.
2. Open the Products page.
3. Select a product.

4. Click **Add to Cart**.
5. Open the shopping cart.

Expected Result:

The selected product should be displayed in the cart and the cart count should be updated.

TC-004 – Remove Product from Cart

Objective: Verify that a product can be removed from the shopping cart.

Steps:

1. Log in using standard_user.
2. Add a product to the cart.
3. Open the shopping cart.
4. Click **Remove** for the selected product.

Expected Result:

The selected product should be removed from the cart and the cart count should be updated.

TC-005 – Complete Checkout

Objective: Verify that a user can complete the checkout process.

Steps:

1. Log in using standard_user.
2. Add a product to the cart.
3. Open the cart.
4. Click **Checkout**.
5. Enter First Name, Last Name, and Postal Code.
6. Continue to the order summary.
7. Complete the checkout process.

Expected Result:

The user should be able to complete the checkout process and receive the appropriate order confirmation.

7. Risk Assessment

Area	Possible Risk	Impact	Risk Level
Login	User may not be able to log in correctly	User cannot access the application	High
Product Details	Wrong product information may be displayed	User may select or purchase the wrong product	High
Add to Cart	Products may not be added correctly	User may not be able to purchase a product	High
Remove from Cart	Products may remain in the cart	Incorrect cart contents	High
Checkout	Checkout fields or navigation may not work correctly	User may not be able to complete an order	High
Product Images	Images may not match products	User confusion and poor experience	Medium
Performance	Pages may load slowly	Poor user experience	Medium

8. Exploratory Testing Findings

During exploratory testing with the problem_user account, the following issues were identified:

1. A different product opens when selecting certain products.
2. Add to Cart does not work from the product details page.
3. Remove does not remove a product from the cart.
4. Some products cannot be added to the cart.
5. Checkout focus unexpectedly moves from the Last Name field to the First Name field.

These issues are documented separately in the Bug Report.

9. Entry Criteria

Testing can begin when:

- The Swag Labs website is accessible.
- The provided test accounts are available.
- A supported browser is available.
- The tester can access the Products, Cart, and Checkout pages.

10. Exit Criteria

Testing can be considered complete when:

- The planned test cases have been executed.
- The main application areas have been explored.
- Identified defects have been documented.

- At least five distinct bugs have been demonstrated and reported.

11. Conclusion

This test plan covers the main functionality of the Swag Labs e-commerce application.

Manual functional and exploratory testing will be used to verify the expected behaviour of the application and identify defects that may affect users. The identified defects will be documented with clear reproduction steps, expected results, actual results, severity, priority, and impact.
